std::packaged_task

std::packaged_task sınıfı türünden bir nesne asenkron çağrı yapmak amaçlı bir callable sarmalar. std::packaged_task sınıfı türünden bir nesne asenkron çağrı yapmak amaçlı bir callable sarmalar. std::packaged_task sınıfı türünden bir nesne asenkron çağrı yapmak amaçlı bir callable sarmalar. std::packaged_task sınıfı türünden bir nesne asenkron çağrı yapmak amaçlı bir callable sarmalar. std::packaged_task sınıfı türünden bir nesne asenkron çağrı yapmak amaçlı bir callable sarmalar. std::packaged_task sınıfı türünden bir nesne asenkron çağrı yapmak amaçlı bir callable sarmalar. std::packaged_task sınıfı türünden bir nesne asenkron çağrı yapmak amaçlı bir callable sarmalar. std::packaged_task sınıfı türünden bir nesne asenkron çağrı yapmak amaçlı bir callable sarmalar. std::packaged_task sınıfı türünden bir nesne asenkron çağrı yapmak amaçlı bir callable sarmalar. std::packaged_task sınıfı türünden bir nesne asenkron çağrı yapmak amaçlı bir callable sarmalar. std::packaged_task sınıfı task s

std::packaged_task sınıfı çoğunlukla aşağıdaki gibi kullanılır:

• İş yükü olan callable bir std::packaged_task nesnesi ile sarmalanır:

• Bir std::future nesnesi oluşturulur:

```
std::future<int> ftr = ptask.get_future();
```

• callable çağrılır:

ptask(10, 20);

• sonuç elde edilir

ftr.get();
